

CSEN1002 Compilers Lab, Spring Term 2023
Task 6: Context-Free Grammars First and Follow

Due: Week starting 25.04.2023

1 Objective

For this task you will implement the algorithms computing the functions *First* and *Follow*, introduced in Lecture 4 of CSEN1003, for the *variables* of a given context-free grammar. Recall that a CFG is a quadruple (V, Σ, R, S) where V and Σ are disjoint alphabets (respectively, containing *variables* and *terminals*), $R \subseteq V \times (V \cup \Sigma)^*$ is a set of *rules*, and $S \in V$ is the *start variable*.

2 Requirements

- We make the following assumptions about input CFGs for simplicity.
 - a) The set V of variables consists of upper-case English letters.
 - b) The start variable is the symbol S .
 - c) The set Σ of terminals consists of lower-case English letters (except the letter **e**).
 - d) The letter “**e**” represents ε .
- You should implement a class constructor `CfgFirstFollow`, and two methods; `first`, and `follow`.
- `CfgFirstFollow`, a class constructor, takes one parameter which is a string description of a CFG and constructs a CFG instance. A string encoding a CFG is of the form $V\#T\#R$.
 - V is a string representation of the set of variables; a semicolon-separated sequence of upper-case English letters, starting with S .
 - T is a string representation of the set of terminals; a semicolon-separated sequence of alphabetically sorted lower-case English letters.
 - R is a string representation of the set of rules. R is a semicolon-separated sequence of pairs. Each pair represents a largest set of rules with the same left-hand side. Pairs are of the form i/j where i is a variable of V and j is a string representation of set of right-hand sides—a comma-separated sequence of strings. These pairs are sorted by the common left-hand side i based on the ordering of V .
- For example, consider the CFG $G_1 = (\{S, T, L\}, \{a, b, c, d, i\}, R, S)$, where R is given by the following productions.

$$\begin{array}{lcl} S & \longrightarrow & S \ c \ T \mid T \\ T & \longrightarrow & a \ S \ b \mid i \ a \ L \ b \mid \varepsilon \\ L & \longrightarrow & S \ d \ L \mid S \end{array}$$

This CFG will have the following string encoding.

`S; T; L#a; b; c; d; i#S/ScT, T; T/aSb, iaLb, e; L/SdL, S`

- The output of each of **first** and **follow** is a semi-colon-separated sequence of items, where each item is a /-separated pair. The first element of each pair is a variable of the grammar and the second element is a string representing the *First* or, respectively, the *Follow* set of that variable. The symbols in these strings should appear in alphabetical order. (\$) always appears first.) The items themselves should appear in the order in which their respective variables appear in the input CFG.
- For example, the result of calling **first** on G_1 may have the following form

`S/acei; T/aei; L/acdei`

Similarly, the result of calling **follow** on G_1 may be as follows

`S/$bcd; T/$bcd; L/b`

- Important Details:
 - Your implementation should be done within the template file “`CfgFirstFollow.java`” (uploaded to the CMS).
 - You are not allowed to change package, file, constructor, or method names/signatures.
 - You are allowed to implement as many helper classes/methods within the same file (if needed).
 - Public test cases have been provided on the CMS for you to test your implementation.
 - Please ensure that the public test cases run correctly without modification before coming to the lab to maintain a smooth evaluation process.
 - Private test cases will be uploaded before your session and will have the same structure as the public test cases.

3 Evaluation

- Your implementation will be tested by running **first** and **follow** on five CFGs.
- You get one point for each correct output; hence, a maximum of ten points.

4 Online Submission

- You should submit your code at the following link.

<https://forms.gle/kwErNZbz9RdAviRs6>

- Submit one Java file (`CfgFirstFollow.java`) containing executable code.
- **Online submission is due by the end of your lab session.**
